Problem

Autoimmune disease is the leading cause of death and disability among women and underrepresented groups.

- No known cures lead people to look for answers online
- Communities exist online, but are fragmented between platforms
- Wealth of data in these communities that is going unanalyzed

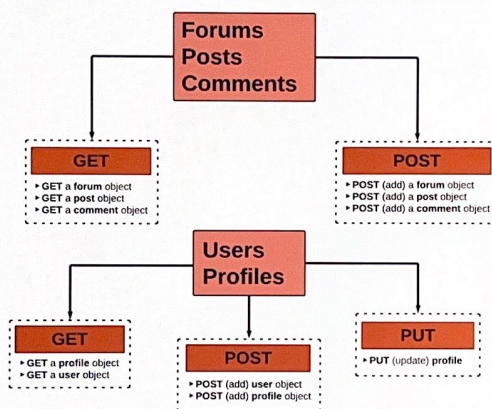

Solution

AI 4 ai, or Artificial Intelligence for autoimmune disorders, is a mobile friendly web application with the goal of becoming a central community for autoimmune disease sufferers.

- Site where patients, supporters, and healthcare professionals can interact
- Users can interact via forums posts and comments
- Users can track disease progression by taking surveys
- Beyond this semester, machine learning models will be used to analyze survey data
